7th NuGO WEBINAR

15 November 2022, 10-11:30 CET

“What does FAIR mean to you?”

Summary

The FAIR principles are often seen as an obligation that funding organisations place on research, to satisfy their wish that the data that is collected on their money provides the most societal value. In this webinar we will turn this burden into a benefit by using FAIR to guide data management decisions from the start of the project. We will argue that this can save a lot more time than it costs, and strongly reduces time needed to publish the data at the end of a project. We will show the first steps any project can take towards more FAIR data, and introduce the Data Stewardship Wizard as a tool to explore more options. There will also be ample time for questions and discussion. What does FAIR mean to you?

CHAIR

[Prof. Chris Evelo](#), Head of the department of Bioinformatics - BiGCaT at Maastricht, NL

[Prof. Lars Ove Dragsted](#), Head of Preventive and Clinical Nutrition, University of Copenhagen, DK

10:00-10:10

Opening by Chris Evelo / Lars Dragsted short introduction of Rob and embedding his presentation in the series of webinars, why is this important for the NuGO community or what you think is appropriate here.

10:10-11:00

[Dr. Rob W.W. Hooft](#), Programme Manager Data Stewardship @ [Dutch Techcentre for Life Sciences](#) (DTL)

Title to be added here

FAIR data, DS Wizard and the philosophy behind, making data FAIR is not only what the funders ask of us, but also really helps in doing research, preventing data management problems instead of curing them.

We'll discuss the first steps for F,A,I,R, and refer to the DS Wizard for more ideas."

11:00-11:15

Q & A and concluding words with announcing the second part of the webinar in January 2023
