What is NuGO?

NuGO is an Association of 31 Universities and Research Institutes across Europe, USA, Australia and China, focusing on jointly developing the existing research area of nutrigenomics, molecular nutrition, personalised nutrition and nutritional systems biology by joint research projects, conferences, workshops and training. NuGO also partners in research projects by providing access to the nutritional phenotype database, access to bioinformatics tools, design and organisation of training courses, meetings, workshops and conferences, dissemination of results and project management support. NuGO is also involved in shaping the nutrition bioinformatics infrastructure by initiating, coordinating and facilitating projects in this area.

NuGO training events

Every year, a variety of **courses, summer schools and winter schools** and **webinars** are organised by NuGO partners on a range of nutrigenomics topics. For each of these events, a number of travel grants are available for NuGO PhD students and early stage post-doctoral students.

NuGO Week

This year our 19th annual conference the **NuGO week** took place in Senigallia, Italy. Professor Gabbianelli brought together 150 researchers from around Europe and beyond, who enjoyed not only the cordial Italian hospitality and the amazing Venue, La Rotonda, but again an awesome scientific NuGO week programme. During 3,5 days, six sessions covering various topics such as early disease biomarkers, learning from the exposome, tools to trace nutritional impact on health, how to “rejuvenate” organs and nutrigenomics in control of low-grade inflammation and social and gender inequalities as driver for unhealthy outcomes. Again NuGO week brought together Early Career and Senior Researchers to discuss about latest findings in nutrition research in a fantastic way!

NuGOweek 2024, we cordially invite you to the **20th NuGO week** in Ghent, Belgium on **"Integrating Nutritional Omics Into a Healthy Diet"**.

Save the date, from 2 to 5 of September 2024!

Early Career Network (ECN)

NuGO has an active **Early Career Network (ECN)** which provides a forum for nutrigenomics researchers at the start of their career. The network promotes opportunities to strengthen collaboration, support learning, career development and support professional development. Their new webinar series is divided into Research presentations, Journal Club and Skills & Training sessions. The ECN also meet at NuGO week during a special event on one of the evenings. One ECN member is part of the NuGO Management Board.

More information on NuGO membership

The fee for an annual membership is €1400. We apply a 50% discount for the first year of NuGO membership.

Please visit our website (www.nugo.org) or e-mail us at nugo@wur.nl to find more information about NuGO, and the benefits that NuGO membership offers. This includes travel grants for attending courses and workshops, access to bioinformatics software, discounted registration fees for attending NuGO week, opportunities to become part of collaborative research opportunities and grant applications etc.

NuGO works with Institutional memberships which means that if you decide to join NuGO, anyone in your Institution with an interest in nutrigenomics/molecular nutrition would be able to benefit from the membership.
